NOC and IT infrastructure professional with **6+ years** of experience keeping high availability networks running across **50+ POPs** and more than **1,000 active users**. Uses an automated Telegram Bot alerting system that cuts average detection time from **10 to 15 minutes** down to about **5 milliseconds**, closing blind spots on critical backbone links. Comfortable working hands on with Huawei, MikroTik, and Cisco equipment, and have kept a **98% uptime SLA** across enterprise backbone and customer facing links.

SKILLS

Networking	: TCP/IP, VLAN, VLAN Trunking, Routing, Static Routing, DHCP, DNS, NAT, Firewall, QoS, VPN
Hardware	: Huawei (switches, OLT, GPON, AP), MikroTik (CCR, CRS, RouterBoards), Cisco (DCN switches), wireless CPE (Aruba, Ruijie, TP-Link).
Monitoring tools	: The Dude, RADIUS, MRTG, MobaXterm, Telegram Bot API, Visual Paradigm.
Operations	: Ticketing systems, incident escalation, vendor coordination, SLA management, basic Linux server admin, fiber optics, UTP cabling.
Familiar With	: Basic : Zimbra, Java, PHP, Python, MySQL database, Microsoft Word, Excel, Powerpoint, Outlook, Slack.

WORK EXPERIENCE

PT Prestasi Piranti Informasi

September 2019 - April 2026

NOC Engineer | Network Operations Engineer | Network Engineer

Jakarta, Indonesia

- Kept a 24/7 uptime SLA of **98%** across more than **50 POPs** by watching the network in real time through The Dude and MobaXterm and fixing issues before they broke SLA limits.
- Managed authentication and account lifecycle for over **1,000 active users** on a RADIUS server, and tracked more than **100 links** in MRTG, which helped avoid around **15 bandwidth-related problems a month**.
- Set up and repaired multi-vendor equipment, including Huawei switches, OLT and GPON, MikroTik CCR/CRS/RouterBoards, Cisco DCN switches, and wireless APs from Aruba, Ruijie, and TP-Link, to support the company's ongoing network growth.
- Familiar with a Telegram Bot alerting system that sends a notification in about **5 milliseconds** when a link goes down or becomes unstable, across **40+ backbone and customer links**. This brought detection time down from the old manual check, which used to take **10 to 15 minutes**.
- Handled customer connectivity tickets end to end (routing, VLAN, firewall config), working daily with internal teams and vendors over Slack and WhatsApp. Closed **20 to 30 tickets a week** on average, usually within **2 hours**.

EDUCATION

Indraprasta PGRI University - Bachelor of Computer Science

September 2021 - August 2025

GPA : 3.52 / 4.00

- Scientific Paper : Sistem Pendukung Keputusan Penjadwalan untuk Penanganan Gangguan Internet Customer dengan Metode Simple Additive Weighting (SAW) PT Prestasi Piranti Informasi

CERTIFICATIONS

- MikroTik Certified Network Associate (MTCNA)

LANGUAGES

- English - Intermediate Working Proficiency.
- Indonesian - Native / Bilingual Proficiency.
